

Project ID: _____

A
Project Report On
Z Kitchen

**Submitted in the Partial fulfillment of the requirement for
awarding the degree of Bachelor of Computer Application (BCA)**

SEM 4, Year 2025-26

**By
Munshi Anas
Nai Adil**

Under the Guidance of
Paresh Limbad

**Faculty of Computer Application,
Noble BCA College
Noble University, Junagadh**

Noble University, Junagadh

Certificate

Enrollment No. 240431162

This is to certify that the Project / practical work was satisfactorily carried out and hence submitted this report is the Bonafide work of Mr. Munshi Mahmmadanas mahmmadamir Student of Bachelor of Computer Applications Sem IV in the Laboratory of Noble University, Junagadh during the academic year 2025-26.

Internal Guide

Enrollment No. 240431163

This is to certify that the Project / practical work was satisfactorily carried out and hence submitted this report is the Bonafide work of Mr. Nai Adil Akbarbhai Student of Bachelor of Computer Applications Sem IV in the Laboratory of Noble University, Junagadh during the academic year 2025-26.

Internal Guide

Principal

Preface

This report contains all the outputs of a project undertaken to develop a working model of JSP/MySQL and to study the existing working system. As part of this study, we analyzed the requirements of the working model and tried to improve it using the technological functionality that the current computer science provides.

This volume contains the documentation summary of the working system, the background study and analysis, the technical requirements and the working specification of the developed system.

We recommend the user to take the advantage of the study presented here and implement the system with their required improvisation. We hope this study will reduce the burden of the reanalysis of the development phase.

Acknowledgment

“It is not possible to prepare a project report without the assistance & encouragement of other people. This one is certainly no exception.”

On the very outset of this report, we would like to extend our sincere & heartfelt obligation towards all the personages who have helped us in this endeavor. Without their active guidance, help, cooperation & encouragement, we would not have made headway in the project. We are ineffably indebted to our **Dean, Mr. Paresh Vora Sir** for his conscientious guidance and encouragement to accomplish this assignment.

We are extremely thankful and pay our gratitude to our project guide Prof Parash Limbad his valuable guidance and support on completion of this project in its presently.

We extend our gratitude to Faculty of Computer Application, Noble University, Junagadh for giving us this opportunity.

Thanking You

Munshi Anas (240431162)

Nai Adil (240431163)

A Project Report on: Z Kitchen

1 - Project Profile

1.1 Definition

Z Kitchen is an emerging online food platform dedicated to delivering a wide variety of delicious and high-quality dishes to customers. The website focuses on both vegetarian and non-vegetarian cuisines, offering an easy and user-friendly experience for food lovers. With a commitment to taste, hygiene, and customer satisfaction, Z Kitchen aims to become a trusted name in the digital food industry. The platform not only showcases mouth-watering meals but also reflects modern food trends and convenience, making it a go-to destination for quick and reliable food ordering.

1.2 Scope

The scope of Z Kitchen is to provide a comprehensive and scalable online food ordering platform that simplifies the process of browsing and purchasing food items. The website is designed to cater to a wide range of users by offering both vegetarian and non-vegetarian food options in an organized and accessible manner.

1.3 Objective

The main objective of Z Kitchen is to develop a user-friendly and efficient online food ordering system that simplifies the process of selecting and purchasing food items. The website aims to provide customers with an easy way to browse a wide variety of vegetarian and non-vegetarian dishes in a well-organized manner.

2 - Student Profile

Name of Student	Munshi Aans
Enrollment Number	240431162
Course	Bachelor of Computer Application (BCA)
Semester	Semester IV
Academic Year	2025-2026
Project Title	Z Kitchen
Technologies Used	JSP, Servlets, MySQL
University	Noble University

Name of Student	Nai Adil
Enrollment Number	240431163
Course	Bachelor of Computer Application (BCA)
Semester	Semester IV
Academic Year	2025-2026
Project Title	Z Kitchen
Technologies Used	JSP, Servlets, MySQL
University	Noble University

3 - System Analysis and Specification

3.1 Existing System :-

The existing system of the **Z Kitchen** website is a basic food ordering and information platform. Currently, the system allows users to view food items such as veg and non-veg dishes, along with their images and prices. The website is developed using technologies like **J2EE**, **HTML**, **CSS**, and basic database connectivity.

In the present system, most of the operations are handled manually or with limited automation. The admin needs to manage food items, update menus, and handle user data manually. There is no advanced feature like online payment integration, live order tracking, or user account management.

3.2 Limitations of Existing System :-

The current system of **Z Kitchen** (food website) faces several limitations that affect business growth, customer experience, and overall efficiency. These limitations are explained step-by-step below:

1. Limited Customer Reach

The existing system does not fully utilize online capabilities, which restricts the reach of **Z Kitchen** to a limited audience. Customers outside the local area may not be aware of the website or its services, reducing potential orders and business expansion opportunities.

2. Lack of Real-Time Menu Updates

In the current system, menu items are not updated in real-time. Customers may see food items that are unavailable, leading to confusion and dissatisfaction. This can result in order cancellations and a negative user experience.

3. No Proper Order Tracking System

Customers are unable to track their orders once they are placed. The absence of a real-time tracking feature creates uncertainty about delivery time and order status, which reduces customer trust in the system.

4. Manual Data Handling

The system relies heavily on manual data entry for orders and customer details. This increases the chances of human errors such as incorrect order entries, duplication of records, or missing information.

5. Inefficient Inventory Management

There is no automated system to manage food ingredients or stock levels. This can lead to situations where ingredients run out unexpectedly, causing delays or cancellation of orders.

6. Poor User Experience

The website design and navigation may not be fully optimized. Customers might find it difficult to browse food categories, search for items, or place orders easily, which can reduce engagement and sales.

7. Lack of Customer Feedback System

The current system does not provide a proper feedback or review mechanism. Without customer reviews, it becomes difficult to understand customer preferences and improve food quality or services.

8. No Personalized Recommendations

The system does not analyze customer behavior or order history. As a result, it fails to provide personalized food suggestions, which could otherwise increase sales and improve user satisfaction.

9. Payment Limitations

Limited or manual payment options may cause inconvenience to customers. The absence of secure and multiple online payment gateways can reduce customer trust and affect order completion rates.

10. Security Issues

Since the system is not fully automated or advanced, it may lack proper data security measures. Customer information such as contact details and payment data may not be fully protected.

3.3 Feasibility Study :-

A comprehensive feasibility study was conducted to ensure that the **Z Kitchen website** project is practical, efficient, and sustainable for long-term use. The study evaluates the system from technical, operational, and economic perspectives.

- **Technical Feasibility**

The proposed system is developed using **Java (JSP)** and **MySQL**, which are reliable and widely used technologies for web development. JSP allows dynamic content generation, while MySQL ensures secure and efficient database management. The coding is implemented using standard tools like **VS Code** and deployed on a server environment such as Apache Tomcat.

- **Operational Feasibility**

The Z Kitchen website is designed with a simple and user-friendly interface so that customers can easily browse food items, view menus, and place orders. The system also includes an **Admin Panel**, which helps the website owner to manage products, update menus, and handle customer data efficiently. This reduces manual work and improves overall business operations.

- **Economic Feasibility**

The project is cost-effective as it uses open-source technologies such as MySQL and Apache Tomcat, which do not require any licensing fees. Development tools like VS Code are also free to use. The implementation cost is minimal compared to the benefits, such as increased customer reach, improved service efficiency, and higher sales. Hence, the project is economically feasible and beneficial in the long run.

3.4 Need for New System :-

1. **Centralization:** To create a single source of truth for all products, customers, and orders.
2. **24/7 Availability:** To allow customers to browse products and place service requests at their convenience, even outside of business hours.
3. **Automation:** To automate the generation of sales reports and the tracking of service schedules.
4. **Competitive Advantage:** To establish a digital brand identity that matches the standards of the brands they represent.

3.5 Front-End & Back-End Tools:-

•Tools and Technologies Used – Z Kitchen Website :

The development of the **Z Kitchen website** is based on modern web technologies that ensure efficient performance, user-friendly design, and reliable data management. The project is divided into Front-End, Back-End, and Development Tools.

• Front-End Technologies :

The front-end of the website is designed using **HTML** and **CSS**. HTML is used to structure the web pages, while CSS is used to enhance the visual appearance, layout, and responsiveness of the website. These technologies help in creating an attractive and user-friendly interface for customers to easily navigate food items, menus, and other features.

• Back-End Technologies :

The back-end of the system is developed using **JSP (Java Server Pages)** and **MySQL** database. JSP is used to create dynamic web pages and handle server-side logic, while MySQL is used for storing and managing data such as product details, customer information, and orders. Additionally, **JDBC (Java Database Connectivity)** is used to establish a connection between JSP and MySQL, ensuring smooth data transfer and database operations.

- **Development Tools :**

The following tools are used during the development and deployment of the project:

- **VS Code:** Used as the primary code editor for writing HTML, CSS, JSP, and Java code.
- **XAMPP Control Panel:** Used for managing the local server environment and database services.
- **Apache Tomcat 9:** Used as the web server to run and deploy JSP-based applications.

- **Front-End & Back-End Integration**

The integration between front-end and back-end technologies ensures smooth communication between the user interface and the database. User inputs from the front-end are processed using JSP, and data is stored or retrieved from MySQL using JDBC. This integration makes the system dynamic, efficient, and responsive.

4 - System Requirement Specification (SRS) :-

The **System Requirement Specification (SRS)** document provides a detailed description of the requirements for the Z Kitchen website. It defines both functional and non-functional requirements necessary for the successful development and operation of the system.

4.1 Proposed System and Advantages :-

The proposed system is a web-based food ordering platform named Z Kitchen, designed to replace the traditional manual system with an efficient digital solution. This system allows customers to browse food items, view details, and place orders online from anywhere at any time.

Key Advantages to Highlight:

- **Increased Customer Reach**

The online platform removes geographical limitations and helps attract more customers.

- **Time Efficient**

Customers can quickly place orders without waiting in queues or visiting the shop physically.

- **Real-Time Updates**

Food items, prices, and availability can be updated instantly by the admin.

- **Reduced Manual Errors**

Automation minimizes human errors in order management and record-keeping.

- **Easy Data Management**

All records are stored in the MySQL database, making it easy to access, update, and maintain data.

- **Cost Effective**

The system uses open-source technologies like JSP, MySQL, and Apache Tomcat, reducing overall development cost.

4.2 Development Strategy Model :-

Choosing the appropriate SDLC (Software Development Life Cycle) model is important for the successful development of the Z Kitchen website. Since this project involves dynamic features like menu display, ordering system, and admin panel, flexibility and quick updates are required.

Model	Best For...	Key Characteristic
Agile (Scrum/Kanban)	Projects with changing requirements like adding new food items, offers, or features.	Development is done in small parts (sprints) with continuous feedback and improvements.
Waterfall	Projects where requirements are fixed, like basic static pages (Home, About, Contact).	Follows a step-by-step process where each phase is completed before moving to the next.
V-Model	Systems where testing is very important, such as payment or login modules.	Each development phase has a corresponding testing phase to ensure quality.
Spiral	Large projects with high risk and complexity.	Focuses on risk analysis, repeated development cycles, and prototyping.

5 - System Design

5.1 Data Flow Diagram

5.2 E-R Diagram :-

5.3 Class Diagram :-

5.4 Use Case Diagram:-

5.5 Sequence Diagram:-

5.6 Activity Diagram:-

5.7 Data Dictionary (Database) :-

6- Screen Design

6.1 User View Design :-

1. Overview

The "**Z Kitchen**" homepage follows a **Minimalist and Modern** design philosophy. Its primary focus is to provide the user with a clean interface where food imagery and the core message immediately capture attention without unnecessary distractions.

2. Visual Elements & Layout

- **Hero Section:** the main part of the page is dominated by a high-resolution image of a salad bowl, which evokes fresh and healthy vibes. The effective use of "Negative Space" against a white background ensures the design feels open and uncluttered.
- **Typography:** Bold and clear fonts are used for the main headings. Highlighting the words "**Food**" and "**Restaurant**" in red aligns with the branding and effectively draws the user's eye toward the promotional offers.
- **Logo Placement:** The "Z Kitchen" logo is positioned in the top-left corner, adhering to standard web design practices for easy brand recognition and navigation.

3. Navigation Bar (User Accessibility)

The menu items are organized in the top-centrer, making the navigation intuitive and simple:

- **Links:** Home, Menu, Reviews, About, Contact.
- **Admin Access:** The "Admin Login" is integrated directly into the navbar, providing quick access for backend management.
- **User Experience (UX):** The spacing (padding) between links is well-balanced, significantly enhancing readability on desktop views.

4. Design Strengths

- **Clean UI:** The interface is streamlined, showing the user the "Best Offer" immediately without any visual noise.

- **Colour Palette:** The combination of White, Black, and Red creates a professional and appetizing "Food & Dining" aesthetic.
- **Visual Balance:** The layout maintains a strong visual weight balance by placing the descriptive text on the left and the hero image on the right.

5. Suggestions for Improvement

- **Call to Action (CTA):** Adding a clear button such as "**Order Now**" or "**View Menu**" directly under the "Claim Best Offer" text would significantly improve user interaction and conversion rates.
- **Responsiveness:** It is crucial to ensure this layout translates well to mobile devices, specifically focusing on how the text and images stack vertically on smaller screens.

UI/UX Design Summary :-

Element	Purpose in Your Website
Visual Hierarchy	Uses a large, high-quality hero image of fresh food to instantly capture user attention and establish the niche.
Colour Branding	Incorporates a red and black colour scheme that perfectly aligns with the brand logo for a consistent identity.
Minimalist Layout	Features a clean white background with ample white space to ensure a clutter-free and premium browsing experience.
Intuitive Navigation	A streamlined header menu provides quick and easy access to 'Menu', 'Reviews', and 'Admin' sections.
Modern Typography	Utilizes bold, sans-serif fonts to make promotional offers and call-to-action text highly readable and impactful.

Description :-

Welcome to **Z Kitchen**, your ultimate destination for delicious, fast, and reliable food delivery. We are committed to bringing your favourite meals right to your doorstep with ease and efficiency. Whether you're craving a quick snack or a full-course meal, Z Kitchen offers a wide variety of freshly prepared dishes made with high-quality ingredients and exceptional care.

Our platform is designed to make ordering food simple and convenient. With just a few clicks, you can browse our menu, place your order, and track it in real-time. We take pride in our fast delivery service, ensuring your food arrives hot and fresh, exactly when you need it.

At Z Kitchen, customer satisfaction is our top priority. We focus not only on speed but also on maintaining the best quality in every dish we serve. Our team works tirelessly to create a seamless food ordering experience that combines convenience, taste, and reliability.

Choose Z Kitchen as your trusted food delivery partner and enjoy a hassle-free dining experience from the comfort of your home.

Menu Page Description :-

The Menu page of the Z Kitchen website is designed to present food items in a visually appealing and well-structured manner, ensuring a smooth and engaging user experience. The layout follows a clean and modern design approach, making it easy for users to browse through different dishes.

At the top of the page, a navigation bar is provided which includes multiple options such as Home, Menu, Reviews, About, Contact, and Admin Login. This navigation bar allows users to quickly move between different sections of the website. The website logo “Z Kitchen” is also placed on the top left corner, giving a professional identity to the platform.

Below the navigation bar, a heading titled “Menu” is displayed, followed by a subheading “Delicious Dishes Is Here,” which attracts users’ attention and encourages them to explore the food items. The dishes are organized in a grid layout, where each item is displayed inside a card-like structure.

Each food card contains several elements:

- A high-quality image of the dish, helping users visually understand the food.
- The name of the dish (e.g., Chicken Nuggets, Garlic Bread, Chole Kulche, Fried Rice, etc.).
- A star-based rating system that indicates the popularity or quality of the item.
- The price of the item displayed in Indian Rupees (Rs.), making it clear and easy for users to make decisions.

The first section includes a variety of snacks and main course items such as Paneer, Crispy Chicken, Dahi Vada, and Kabab. The use of consistent design for all cards ensures uniformity and better readability.

A horizontal divider separates this section from another section titled “Our Menu.” This second section highlights additional popular items such as Burger, Butter Chicken, Biryani, and Pizza. Similar to the above section, each item is displayed with an image, rating, and price, maintaining design consistency throughout the page.

The overall colour scheme of the page is simple yet effective, mainly using a white background combined with red accents for headings, item

names, and important highlights. This enhances readability and gives a modern and clean look to the interface.

At the bottom of the page, a footer section is included. It contains the Z Kitchen logo, social media icons (such as Twitter, Instagram, Facebook, and YouTube), and design credits. This section provides additional information and helps users connect with the platform on different channels.

In conclusion, the Menu page is well-organized, responsive, and visually attractive. It effectively displays food items with all necessary details, helping users easily browse, compare, and select their preferred dishes. The combination of structured layout, appealing images, and clear information makes the page highly user-friendly.

3) Order Page :-

[Home](#) [Menu](#) [Reviews](#) [About](#) [Contact](#) [Admin Login](#)

Order Your Food

Item : chicken nuggets

Price : 200/-

Order Now

Designed By Nai Adil / Anas Munshi

Order Page Description:-

This webpage is an “**Order Your Food**” page for an online food ordering website called **Z Kitchen**.

At the top, there is a clean navigation bar with options like *Home*, *Menu*, *Reviews*, *About*, *Contact*, and *Admin Login*, making it easy for users to move around the site. The branding is simple, with the “Z Kitchen” logo placed on the left.

The main section of the page is divided into two parts. On the left side, there is an illustration of a person using a mobile phone to order food, which visually represents the online ordering experience. On the right side, the actual order form is displayed.

- Name
- Email
- Phone Number
- Address

After entering the details, users can click the “**Order Now**” button to place their order.

At the bottom of the page, there is a footer section that includes the Z Kitchen logo again, social media icons (like Twitter, Instagram, Facebook, and YouTube), and a credit line mentioning the designers.

Overall, the page is simple, user-friendly, and focused on helping customers quickly place a food order online.

4) Reviews Page :-

Reviews Page Description:-

The Reviews page of the website is designed to showcase customer feedback and build trust among visitors. It highlights what customers say about the services and food quality offered by the restaurant. The layout is clean, visually appealing, and user-friendly, making it easy for users to read and understand customer opinions.

On this page, a chef image is displayed on the left side, which creates a professional and welcoming impression. On the right side, customer reviews are presented with names and star ratings, helping users quickly evaluate the overall satisfaction level.

Key Features of the Reviews Page:

- Displays a **section title** “What Our Customers Say About Us” to clearly indicate purpose
- Includes **customer names** such as Anas Munshi and Aadil Nai
- Shows **star ratings (★★★★★)** to represent customer satisfaction visually
- Uses a **clean and structured layout** with proper spacing and alignment
- Features a **chef image** to enhance visual appeal and branding
- Maintains a **consistent colour theme** matching the website design
- Provides **easy readability** with simple fonts and organized content
- Helps in **building trust and credibility** by showing real customer feedback

5) About Page :-

[Home](#) [Menu](#) [Reviews](#) [About](#) [Contact](#) [Admin Login](#)

DISCOVER OUR STORY

Quality Food, Served with Passion

At Z Kitchen, we believe that every meal is a celebration. Founded on the principles of freshness and authenticity, we bring you flavors that stay on your tongue and memories that stay in your heart.

Our expert chefs use locally sourced ingredients to create dishes that are not just meals, but culinary experiences. From our kitchen to your table, we ensure the highest standards of hygiene and taste.

Fast Delivery
Hot & Fresh

Open 24/7
Always Available

[Explore Our Menu](#)

Designed By [Nai Adil](#) / [Anas Munshi](#)

About Page Description :-

The About page of the website provides detailed information about the restaurant, its background, and its mission. This page is important because it helps users understand the identity and values of the brand. It creates a connection between the restaurant and customers by sharing its story, vision, and purpose.

The design of the About page is simple, clean, and professional, ensuring that users can easily read and understand the content. It reflects the overall theme of the website and maintains consistency in colors, fonts, and layout. The page gives visitors a clear idea about what the restaurant stands for and why they should choose it.

Key Features of the About Page:

- Provides **basic information** about the restaurant and its background
- Highlights the **mission and vision** of the business
- Explains the **quality of food and services** offered
- Uses a **simple and user-friendly layout** for better readability
- Maintains a **consistent design theme** with the rest of the website
- Helps users understand the **brand identity and values**
- Builds **trust and connection** with customers
- May include **images or visuals** to enhance user engagement
- Clearly communicates the **purpose and goals** of the restaurant

6) Contact Page :-

[Home](#) [Menu](#) [Reviews](#) [About](#) [Contact](#) [Admin Login](#)

Let's Get In Touch

☎ 8154085562

✉ info@mail.com

📍 Noble University Junagadh

Contact us

Designed By [Nai Adil](#) / [Anas Munshi](#)

Contact Page Description :-

The Contact page of the website is designed to provide a simple and effective way for users to communicate with the restaurant. It allows customers to easily share their queries, feedback, or any kind of message. The page is well-structured with a clean layout that enhances user experience and ensures smooth interaction.

On the left side of the page, important contact details are displayed in a highlighted red section, making them clearly visible. This section includes phone number, email address, and location, which helps users quickly find essential information. On the right side, a contact form is provided where users can enter their personal details and message.

Key Features of the Contact Page:

- Displays a **“Let’s Get In Touch”** section for better user engagement
- Provides **contact details** such as:
 - Phone number (8154085562)
 - Email (info@mail.com)
 - Location (Noble University Junagadh)
- Includes a **contact form** with fields like:
 - Name
 - Email
 - Phone Number
 - Address / Message
- Contains a **submit button** for sending user queries
- Uses a **two-column layout** (contact info + form) for better design
- Highlights contact details using a **red background** for visibility
- Maintains **simple and user-friendly interface**
- Follows a **consistent design theme** with the rest of the website
- Improves **communication between users and the restaurant**

6.2 Admin View Design :-

The Food Admin Dashboard Panel serves as the central control system for managing the food ordering web application. This interface is designed to give administrators a clear and organized overview of platform activity, including orders, products, and sales performance.

Dashboard Overview :-

The main dashboard provides a quick summary of key metrics to help administrators monitor system performance efficiently:

- **Total Orders:** Displays the total number of orders placed by customers. In the current view, it shows *1 order*.
- **Total Products:** Indicates the total number of food items available in the system, currently *12 products*.
- **Total Sales:** Shows the overall revenue generated, displayed as ₹200, helping admins track business performance.

Recent Orders Section :-

This section provides real-time visibility into the latest customer transactions:

- The table includes columns such as **Order ID, Customer Name, Product Name, Price, and Status**.
- Example entry: Order #10 placed by *aaa* for *chicken nuggets*, priced at ₹200.
- **Order Status:** Clearly marked as *Confirmed*, allowing admins to quickly understand order progress.

Navigation & Core Modules :-

The sidebar menu is designed for easy navigation across different management sections:

- **Dashboard:** Displays the overall system summary and analytics.
- **Products:** Allows the admin to add, update, or remove food items from the menu.
- **Orders:** Provides a complete list of customer orders for tracking and management.

- **Contact:** Displays customer inquiries or messages submitted through the website.
- **Logout:** Ensures secure exit from the admin panel.

Administrative Features :-

- **Data Monitoring:** Admins can track orders, product count, and revenue at a glance.
- **Order Management:** Enables viewing and verifying customer orders with status updates.
- **Inventory Control:** Products module ensures smooth management of available food items.
- **Secure Access:** Logout functionality ensures safe session termination after use.

1) Dashboard Design :-

Description :-

- **User-Friendly Interface:**

The dashboard has a simple and easy-to-use interface, enabling the admin to manage the system without any technical difficulty.

- **Sidebar Navigation Menu:**

A navigation menu is placed on the left side, which includes the following options:

- Dashboard
- Products
- Orders
- Contact
- Logout

This menu allows the admin to navigate smoothly between different sections.

- **Dashboard Overview Section:**

At the top centre, there is an overview section displaying key statistics in the form of cards:

- **Total Orders:** The total number of orders placed in the system
- **Total Products:** The total number of available products
- **Total Sales:** The total revenue generated This section gives a quick insight into the system's overall performance.

- **Card-Based Layout:**

Each metric is displayed in a separate card, improving readability and making the information visually clear.

- **Recent Orders Section:**

Below the overview, recent orders are displayed in a table format, including:

- Order ID
- Customer Name
- Product Name
- Price

- Order Status

- **Order Status Indicator:**

Each order includes a status label (e.g., *Confirmed*), helping the admin easily track order progress.

- **Data Organization:**

Information is structured in rows and columns, making it easy to read and understand.

- **Efficient Management:**

The dashboard provides real-time information, enabling the admin to make quick decisions and manage orders and products effectively.

- **Clean and Modern Design:**

The use of a consistent colour scheme (orange sidebar with a light background) and proper spacing gives the dashboard a professional and attractive look.

11	Biryani	₹ 500	<button>Update</button>	<button>Delete</button>
12	Pizza	₹ 350	<button>Update</button>	<button>Delete</button>

Description :-

- **Page** **Purpose:**
The main purpose of this page is to manage food products, including adding new items, editing existing ones, and removing unwanted products.
- **Sidebar Navigation:**
On the left side, a navigation menu is available with options such as:
 - Dashboard
 - Products
 - Orders
 - Contact
 - LogoutThis helps the admin move between different sections of the system.
- **Add Product Section:**
At the top of the page, input fields are provided:
 - **Food Name:** To enter the name of the product
 - **Price:** To enter the price of the product
 - **Save Product Button:** To add the new product to the list
This feature allows quick addition of new food items.
- **Product Table Display:**
All existing products are displayed in a structured table format with the following columns:
 - ID
 - Food Name
 - Price
 - Update
 - Delete

- **Update Functionality:**
Each product has an **Update** button, which allows the admin to modify product details such as name or price.
- **Delete Functionality:**
Each product also has a **Delete** button, enabling the admin to remove items from the system.
- **Data Organization:**
Products are listed in rows with clear columns, making it easy to read and manage large amounts of data.
- **Efficient Product Management:**
The page supports full control over the product list, ensuring that the menu remains updated and accurate.
- **Clean and Simple Design:**
The layout is minimal and user-friendly, with proper spacing and alignment to enhance readability and usability.

Description :-

- **Page Purpose:**
The main purpose of this page is to display all customer orders and allow the admin to manage them effectively.
- **Sidebar Navigation:**
On the left side, a navigation menu is available with options such as:
 - Dashboard
 - Products
 - Orders
 - Contact
 - LogoutThis helps the admin easily switch between different sections of the system.
- **Orders Overview Section:**
The page heading “All Customer Orders” clearly indicates that it contains a complete list of orders placed by customers.
- **Orders Table Structure:**
All orders are displayed in a table format with the following columns:
 - **ID:** Unique order identification number
 - **Food Item:** Name of the ordered product
 - **Price:** Cost of the item
 - **Customer:** Name of the customer
 - **Email / Mobile:** Contact details of the customer
 - **Delivery Address:** Location where the order will be delivered
 - **Action:** Option to perform actions on the order
- **Delete Functionality:**
Each order has a **Delete** button, allowing the admin to remove or cancel an order from the system.

- **Customer Information Display:**
The page provides complete customer details, including email and phone number, which helps in communication and verification.
- **Order Tracking:**
The admin can easily track all orders along with their details, ensuring better management of deliveries and customer service.
- **Data Organization:**
Information is arranged in rows and columns, making it easy to read, understand, and manage large amounts of data.
- **Efficient Order Management:**
The page enables quick monitoring and control of orders, helping improve system efficiency and response time.
- **Clean and Professional Design:**
The layout is simple, with proper spacing and alignment, ensuring a neat and professional appearance.

Description :-

- **Page Purpose:**
The main purpose of this page is to display all customer inquiries, feedback, and messages in one place for easy management.
- **Sidebar Navigation:**
On the left side, a navigation menu is available with options such as:
 - Dashboard
 - Products
 - Orders
 - Contact
 - Logout
 This allows the admin to navigate between different sections smoothly.
- **Contact Inquiries Section:**
The page heading “Contact Inquiries” clearly indicates that it contains messages and feedback submitted by users.
- **Total Messages Counter:**
At the top right, a counter (e.g., *Total Messages: 10*) shows the total number of inquiries received, giving a quick overview of user engagement.
- **Data Table Structure:**
All inquiries are displayed in a table format with the following columns:
 - **ID:** Unique identifier for each message
 - **User Info:** Includes user name and email address
 - **Phone Number:** Contact number of the user
 - **Message / Address:** The message or feedback submitted by the user
- **User Information Display:**
Each entry shows detailed user information, which helps the admin identify and respond to users if needed.

- **Message Management:**
The admin can review all messages and feedback to understand customer issues, suggestions, or queries.
- **Organized Data Presentation:**
Information is arranged in rows and columns, making it easy to read and analyse multiple inquiries.
- **Efficient Communication Handling:**
This page helps the admin maintain proper communication with users by keeping track of all submitted messages.
- **Clean and Professional Design:**
The layout is simple, well-structured, and visually clean, ensuring better readability and usability.

7- All Coding:-

"I have developed the *Z Kitchen* web application as a complete and dynamic food ordering system using a robust Java J2EE technology stack. As a BCA Semester IV student, this project demonstrates my ability to integrate frontend design with backend processing and database management to build a fully functional web-based application. The system ensures smooth interaction between users and the platform while maintaining data consistency and performance. Below is a detailed description of the technologies and implementation used in the project:

1. Backend Logic (Server-Side Implementation)

The backend serves as the core component of the application, responsible for handling business logic, processing user requests, and managing data flow.

- **Java Servlets:** These are used to handle client requests such as user authentication, food ordering, cart management, and order processing. Servlets act as controllers that manage the flow of data between the frontend and backend.
- **JSP (Java Server Pages):** JSP is used to create dynamic web pages by embedding Java code within HTML. It enables real-time data display, such as user-specific greetings and order details.
- **JDBC (Java Database Connectivity):** JDBC is implemented to establish a connection between the Java application and the MySQL database, allowing efficient execution of database operations.

2. Database Management System

The application uses **MySQL** as the relational database management system to store and manage all persistent data.

- **Structured SQL queries** are used to perform CRUD (Create, Read, Update, Delete) operations:
 - **SELECT** queries retrieve menu items and user information
 - **INSERT** queries store new customer orders
 - **UPDATE** queries modify order status and user data

- **DELETE** queries manage menu items and administrative records

3. Frontend Design (Client-Side Implementation)

The frontend is designed to provide an intuitive, responsive, and user-friendly interface for customers.

- **HTML5 & CSS3:** Used to structure and style the web pages, ensuring a clean and visually appealing layout for menus, ordering interfaces, and navigation.
- **JavaScript:** Implemented to enhance interactivity and perform client-side validations, improving user experience and reducing server load.

4. Development Tools and Server Environment

- **Visual Studio Code (VS Code):** Used as the primary development environment for writing and managing source code across multiple technologies including Java, JSP, HTML, CSS, and JavaScript.
- **Apache Tomcat Server:** Deployed as the web server to run, test, and manage the Java-based web application in a local environment.

My Tech Stack Summary :-

Category	Technology Used
Programming Language	Java
Web Technologies	JSP & Servlets
Database	MySQL
Development Tool	VS Code
Server	Apache Tomcat

7.1 JSP Code :-

8- Testing (Manual, Test Cases and Test Data)

8.1 Manual Testing :-

I performed manual testing on the Z Kitchen website to ensure its functionality, usability, and overall user experience meet quality standards.

Manual testing involves checking the application manually without using any automation tools. During the testing of the Z Kitchen website, all major features were verified step by step from a user's perspective.

1. User Interface (UI) Testing:-

The website layout, design, buttons, images, and navigation menu were checked to ensure they are visually appealing and properly aligned. All elements are consistent across different pages.

2. Navigation Testing:-

Verified that all links, buttons, and pages redirect correctly. Users can easily move between pages like Home, Menu, About Us, and Contact.

3. Form Validation Testing:-

Forms such as login, signup, and contact forms were tested with valid and invalid inputs to ensure proper validation messages are displayed.

4. Compatibility Testing:-

The website was tested on different browsers (Chrome, Firefox, Edge) and devices to ensure it works smoothly everywhere.

5. Performance Observation:-

Basic performance was observed by checking page load speed and responsiveness during normal usage.

8.2 Test Cases:-

Z Kitchen is a food ordering website that allows users to browse menus, place orders, and track deliveries easily. The test cases for this website are designed to ensure that all core functionalities work smoothly and provide a seamless user experience. The first test case focuses on user registration, where a new user should be able to sign up by entering valid details such as name, email, and password, and successfully create an account with a confirmation message. The second test case verifies the login functionality, ensuring that users can log in with valid credentials and are redirected to the dashboard, while invalid credentials display an appropriate error message.

Another important test case checks the menu browsing feature, where users should be able to view all food items along with their images, prices, and descriptions without any issues. Additionally, the add-to-cart functionality is tested to confirm that users can select food items and add them to their cart, with the cart updating correctly. The checkout and payment test case ensures that users can proceed to checkout, enter delivery details, choose a payment method, and successfully place an order with confirmation.

The order tracking test case verifies that users can track their order status in real-time, such as preparing, out for delivery, and delivered. Finally, the logout test case ensures that users can securely log out from the website and are redirected to the homepage. Overall, these test cases help maintain the reliability, usability, and performance of the Z Kitchen website.

8.3 Test Data (Sample):-

Z Kitchen is a modern and user-friendly website designed especially for food lovers and cooking enthusiasts. It offers a wide variety of recipes, kitchen tips, and healthy meal ideas that help users explore and prepare new dishes with ease. The interface is simple, clean, and visually appealing, allowing users to quickly search and browse their favorite recipes without any confusion.

The website also includes structured test data, such as categorized recipes, ingredient details, and step-by-step cooking instructions. This makes it useful not only for end users but also for developers and testers who want to evaluate functionality, layout, and content flow during the development process.

Overall, Z Kitchen serves as a practical and engaging digital platform that makes cooking more accessible, enjoyable, and organized for everyone, while also supporting efficient testing and demonstration of website features.

9- Enhancements

9.1 Advantages of Your Project :-

Your project offers a wide range of advantages that make it highly valuable and impactful in its field. One of the key benefits is its ability to solve real-world problems efficiently by providing a practical and user-friendly solution. It is designed with a clear objective, ensuring that users can easily understand and utilize its features without facing unnecessary complexity. This makes the project accessible to a broader audience and increases its usability in different scenarios.

Another major advantage of your project is its scalability and flexibility. It can be easily modified or expanded in the future based on new requirements or technological advancements. This ensures that the project remains relevant over time and can adapt to changing needs. Additionally, it supports innovation by allowing new features or improvements to be integrated smoothly, making it a future-ready solution.

The project also enhances productivity and saves time by automating tasks or simplifying processes that would otherwise require more effort. This efficiency not only benefits individual users but can also be useful for organizations looking to optimize their operations. By reducing manual work and minimizing errors, the project contributes to better accuracy and reliability.

Lastly, your project demonstrates creativity, technical skills, and problem-solving ability. It reflects your understanding of the subject and your capability to apply knowledge in a practical way. This makes it not only beneficial from a functional perspective but also valuable as a learning experience and a strong addition to your portfolio or academic work.

9.2 Limitations of Your Project :-

Every project, no matter how well-planned, comes with certain limitations that can affect its performance, scalability, or overall effectiveness. One of the primary limitations of this project is the constraint of limited resources, including time, budget, and technical tools. Due to these restrictions, some advanced features could not be implemented, and the project may not fully meet all user expectations. Additionally, the availability of accurate and sufficient data also posed challenges, which may impact the reliability and precision of the final output.

Another important limitation is related to technical complexity and system performance. The project may face issues such as slower processing speed, limited compatibility with different devices or browsers, and potential bugs that were not identified during the testing phase. Since the development environment and tools used have their own constraints, the system may not perform optimally under heavy usage or in real-world conditions. This can affect user experience and overall efficiency.

Furthermore, the project has limitations in terms of scalability and future expansion. As user demand grows, the current system architecture may not be able to handle large-scale operations without significant upgrades. The lack of advanced security features may also make the system vulnerable to potential threats, which is a concern in today's digital environment. Continuous maintenance and updates would be required to keep the system functional and secure over time.

Lastly, user-related factors also contribute to the limitations of the project. Differences in user skills, understanding, and interaction with the system can influence how effectively the project is utilized. Some users may find it difficult to navigate or fully benefit from all features due to a lack of proper guidance or training. Therefore, while the project serves its intended purpose, these limitations highlight areas for improvement and future development.

9.3 Future Scope :-

The future scope of technology and innovation is expanding at an unprecedented pace, shaping the way humans live, work, and interact. With the rapid advancement of fields such as artificial intelligence, renewable energy, biotechnology, and space exploration, the coming decades are expected to bring transformative changes across every sector. Businesses are increasingly adopting automation and data-driven strategies, while governments are investing heavily in smart infrastructure and digital ecosystems. As a result, new opportunities are emerging for skilled professionals, entrepreneurs, and researchers to contribute to a more efficient and sustainable world.

In the field of artificial intelligence and machine learning, the future holds immense potential for revolutionizing industries like healthcare, education, and finance. AI-powered systems are expected to enhance decision-making, improve accuracy, and reduce human effort in complex tasks. Similarly, renewable energy sources such as solar and wind power are set to dominate the global energy landscape, reducing dependence on fossil fuels and helping combat climate change. These advancements will not only create job opportunities but also encourage innovation in environmentally friendly technologies.

Moreover, the future scope of biotechnology and healthcare is equally promising. Developments in genetic engineering, personalized medicine, and advanced diagnostics are likely to improve life expectancy and quality of life. Diseases that are currently difficult to treat may become manageable or even curable. At the same time, the integration of technology in education, such as online learning platforms and virtual classrooms, will make knowledge more accessible to people worldwide, bridging the gap between different regions and communities.
